IAR Embedded Workbench enables you to efficiently develop all types of embedded applications for a wide variety of processors. It combines the high performance of the IAR C/C++ Compiler™ with the ease of use of the Embedded Workbench environment. It provides a multi-processor environment. It enables you to debug and program using a single IDE with a variety of debug target peripherals. IAR Embedded Workbench supports a broad range of processor architectures. For the Cortex-M series of microprocessors, IAR Embedded Workbench supports the Cortex-M0, M0+, M3, M3+, M4, and M4F processors. This product is the first C/C++ development tool for the ARM Cortex-M family of microprocessors. IAR Embedded Workbench supports the following aspects of the embedded development process: \[IT:c1\] Integrated development environment. \[IT:c2\] Code generation. \[IT:c3\] Integrated debugging. \[IT:c4\] Integrated software modeling. IAR Embedded Workbench supports the microcontroller I/O peripherals for the Cortex-M series of processors. The IAR Embedded
